/Globellibelsoares mammary_gland_NMLMG"

/Globelsoares pT773D-Pac (Pharmacia) with a modified

/Globelsoares pT773D-Pac (Pharmacia)

/Globelsoared from mammary

/Globelsoared from a lactating female, and was then primed

with a Not I - oligo(dT) primer. Double-estranded CDNA was

ligated to Eco RI adaptors (Pharmacia), digested with Not

I and cloned into the Not I and Eco RI sites of the

modified pT773 vector. Library is normalized. Library

was constructed by Bento Scares and M. Fatima Bonaldo. "

Not!; Mouse cDNA project by the Laboratory of Genetics,
Not!; Mouse cDNA project by the Laboratory of Genetics,
National Institute on Aging (NIA). Intramural Research
a long-transcript enriched cDNA library (Ref. Geneme Res.
11: 1553-158 (2001). [PMID: 11544199]). Total RNAs were
obtained from Drs. Dennis Taub, Dan Longo (National
Institute on Aging, USA), Jonathan Keller (National
Institute, USA). Double-stranded cDNAs were synthesized
with an Oligo(dT) priner [Invitrogen:
S'-pGACAGATTCAGARCGGAGCGCCCCTTTTTTTTTTTTT-3'] from
0.9 ug of total RNA, treated with T4 DNA polymerase, and
purified by tethanol-precipitation. The cDNAs were ligated
to Lone-linker Lib-Sal4, purified by phenol/chloroform, and
separated from free linkers by Centricon 100. Then, the
CDNAs were amplified by long-range high fidelity PCR using
Ex Taq polymerase (Takara) with a primer Sal4-S. The
products were purified by phenol/chloroform and Centricon
100. The cDNAs were digested with Sal1 and Not1 enzymes
and cloned into Sal1/Not1 site of pSPORTI plasmid vector.
The DH10B E. coli host was transformed with the lightion
mixture by the standard chemical method. The average
insert size is about 2.1 kb. The library was constructed
by Yilan Plao (NIA)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ठ
to Lone-linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Tag polymerase (Takara) with a primer Sal4-5. The products were purified by phenol/chloroform and Centricon 100. The CDNAs were digested with Sal1 and NoII enzymes and cloned into Sal1/NoII site of pSPORTI plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average missurt size is about 2.1 kb. The library was constructed by Yulan Plao (NIA)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EST 02-MAY-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    i,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 3,

                                                                          TOPOLOGY: linear
MOLECULE TYPE: DNA (genomic)
HYPOTHETICAL: N
ORIGINAL SOURCE:
STRAIN: Hybridoma KM50
SEQUENCE CHARACTERISTICS:
LENGTH: 812 base pairs
TYPE: nucleic acid
STRANDEDNESS: double
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TCCTCA 363

                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                       The present invention relates to coding sequences of the murine 1F7 anti-idiotypic antibody complementarity-determining region (CDR) or framework-determining region (FR). The antibody binds to human or primate anti-human immunodeficiency virus (HIV) antibodies and can be used in the treatment of HIV infection. The present sequence is the 1F7 heavy chain.

                                                                                                                                                                                                                                                       Spleen cells from mice immunized with human IL-4 were used to prepare hybridomap, which were screened for anti-IL-4 MAb secretion. Only clone 3B9 was positive. CDNA clones of the 3B9 light and heavy chains were cloned into pGEN/F+ and transformed into B. coli DHS-alpha. The clones were sequenced (AAQ83490-91), and used for antibody engineering.

                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                          79
                                                                         The present sequence represents the heavy chain variable region of murine interleukin-4 (IL-4) antibody 3B9. The sequences are used in the production chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Inmunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermaltis, atopic asthma, atopic asthma, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and renal disease, rhey are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans.
                                                                                                                                                                                                                                                                                                          20 OVTLKESGPGILQPSQTLSLTCSFSGFSLSTSGMGVSWIRQPSGKGLEWLAHIYWDDDKR

                                                                             This sequence represents the heavy chain of the murine 3B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (II4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermatitis, aropic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

murine/human interleukin-4 (idea) chimeric antibody 389. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic thinitis, conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock, rheny are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. b) ELISA of circulating endogenous IL-4 levels in humans.
                                                                                        New DNA molecules encoding recombinant antibodies useful for

                                                                                                                                                                                                                                       A human/mouse chimeric antibody heavy chain variable region was constructed (given in AAR70191) that contained the mouse anti-human IL-4 MAB 3B9 variable region including 3 CDRs (AAR70198-200) and a human antibody signal peptide (AAR70193). The construct was used (for humanized antibody production.

                AAQ70612 codes for human interleukin-6 binding inhibitor, the polypeptide disesribed in AARS6612. This polypeptide lihibite the binding of human II-6 to its receptor, and can therefore be useful in the treatment of a variety of autoimmune diseases; specifically in the treatment of rheumatoid architis, septic shock due to bacterial infection and multiple myeloma. (Updated on 25-MAR-2003 to correct PN field.)
